Brief problem statement:

The project tries to solve the problem of customer visiting the theatre to book tickets in advance. There are chances of tickets being sold out when the customer goes the theatre for booking his tickets. We are developing an online portal for customer to book the tickets online instead of visiting the theatre to book tickets.

Brief solution description:

We have developed an online portal where the user could select the movie, time, cinema and screen of his choice and get his tickets booked online. This avoids the need for the user to visit the cinema to advance book his tickets. Also, this helps the user to check if the movie is sold out.
